

Excluding historical society and airworthy museum airplanes the Norseman is arguably the oldest transport design in the world that continues to fly in its intended role.

There are currently 41 Norseman on the Canadian Civil Aircraft Register, but over half are not flying. Of these, 10 have had their Certificate of Registration cancelled.

There are 3 known active airworthy Norseman outside Canada, including SE-CGM (Sweden) and N61853, N78691 (United States). See page 3.

COMMERCIAL (7)

N45TG	N29-23	Thomas and Judy Griffen, Baudette, MN	Stored. Ex. CF-BSH.

There are many more Norseman on static display throughout the world. The primary intent of this list is to provide a timely reference for the Norseman community and enthusiasts about the approximately 18 examples that are active 80 years after the prototype, CF-AYO took to the sky on November 14, 1935.

With current restorations, the airworthy world fleet may actually increase in the next few years!
